MOVING

Paramount Construction is a proud member of the community. We have been in the house raising and foundation business for over 45 years.

We repair damaged foundations, install weeping tiles, construct new foundations, build garage slabs as well as raise and move homes. We also provide many other services for the residential home owner and the commercial industry.

As a licenced contractor, Paramount Construction has liability insurance as well as WSIB coverage. We are also a proud member of Sudbury & District Home Builders' Association as well as The Sudbury Construction Association.

Paramount Construction is a strong believer in the strength and durability of poured concrete foundations.

Advantages of poured concrete foundations:

**STRENGTH
DESIGN FLEXIBILITY
WATER RESISTANCE
MAINTENANCE EASE
TIME**

GARAGE SLABS

PREPARING & POURING

FOUNDATION REPAIR

Cracked, uneven foundations can lead to more complicated problems if left untreated. Water can leak into even the smallest of fractures in the walls causing dampness and mold. Filling the concrete blocks with grout is an excellent solution to this problem.

WEEPING TILES

Weeping tiles are used as part of basement waterproofing. Weeping tiles are not actually tiles at all—they are pipes with small holes in them, buried underground around the basement foundation. When it rains, these pipes collect the water that filters through the ground and take it away from your home to prevent groundwater from entering the basement.

BLOCK FOUNDATIONS

NEW FOUNDATIONS

RESIDENTIAL

The increased strength, density, and joint-free construction of poured walls dramatically reduces basement water problems.

COMMERCIAL

Solid wall construction also offers at least twice as much protection against fire compared to hollow core concrete blocks and is adaptable to all structural designs.
